**CAT III**  
**300V**

The MMR-6X0 Series meters are professional portable instruments for measuring very low resistances. Due to their special measurement algorithm they can be used for both resistive and inductive type of a specimen that makes MMR-6X0 series perfect instruments for electricians testing electrical junctions, motors and power transformers windings. The results can be stored in the internal memory and send to a computer via serial interface. A quick PASS/FAIL test function with results displayed and acoustically indicated simplifies measurements considerably.

# MMR-620 & MMR-630

- **Measurement of resistive object type:**
  - welded and soldered connections, equipotential bonding, earth wire,
  - terminals and connectors, rail welded joints, cables and wires,
  - measurement 4-pole method.
- **Measurement of inductive object type:**
  - coils (motors and transformers), low resistance coils.
- **Range selection autoranging or manual (measurement of inductive object type).**
- **Selectable measurement mode adjusted to object type:**
  - for resistive objects - fast mode (3 seconds),
  - for inductive objects - long mode with automatic discharge after measurements (or with lower accuracy - shorter mode).
- **Selectable measurement mode adjusted to application:**
  - normal mode - after pushing „START” button,
  - automatic mode - as test leads are connected to the object meters automatically starts measurement with dual direction current flow and gives average result - what eliminates eventual DC voltage on tested object,
  - continuous mode - every 3 seconds for resistive objects or continuous measurement for inductive objects.
- **Window mode:**
  - this option enables setting an upper and a lower limit between which the average measurement result is bound to appear. The results outside of this range will be indicated by two long audible signals and the symbols.
- **MMR-630 is designated not to be effected by interference up to 20mV and to show noises from 20 to 100mV (so in edge conditions even 5 times higher than measured drop of potential).**
- **Memory of 990 measurement results and with ability to transfer data to a PC.**
